The World is becoming more

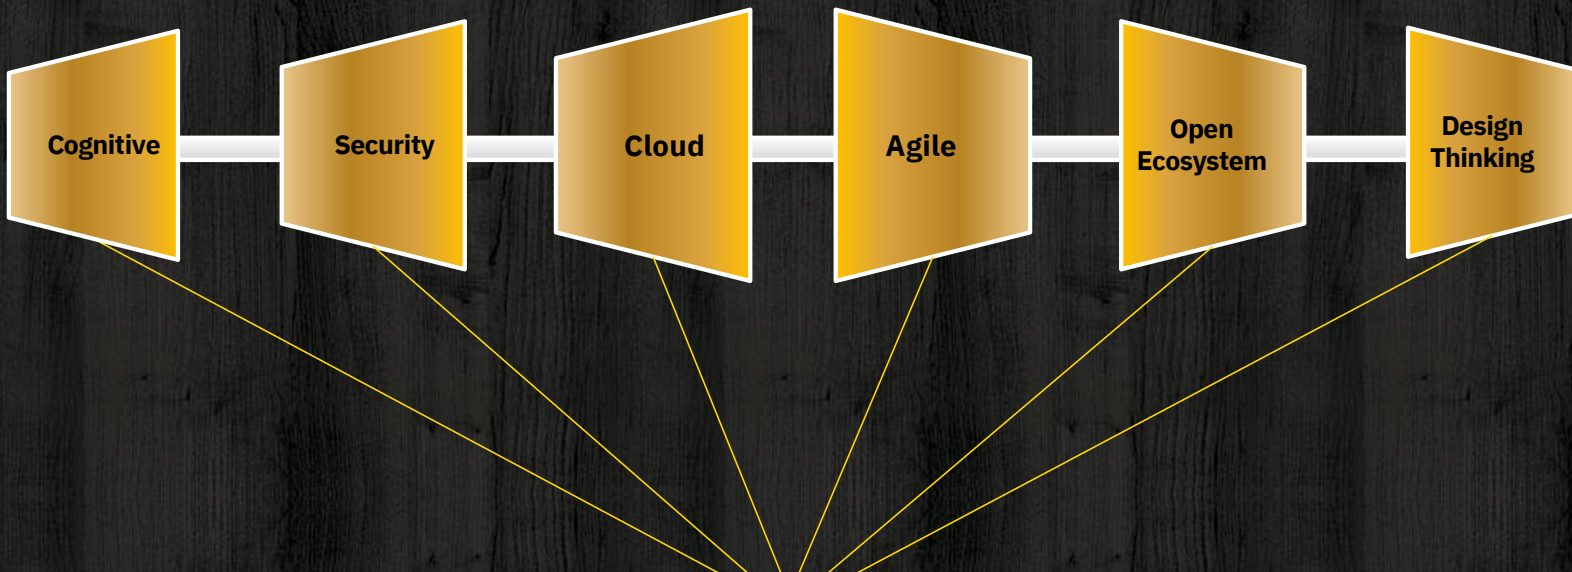

Intelligent, Interconnected and Instrumented

An opportunity to **Think, Act and Transform** into new ways:
Economically, Socially and Technically

The Digital shift
*The Evolved
Business Paradigm*

Enterprises need to **evolve** to deliver the IT
that Modern Businesses demands.

DevOps is the *DNA* of this evolution

Enterprises need to adopt and scale DevOps

*of companies believe
DevOps is critical*

But Only

*leverage
DevOps effectively
today*

46x
More Frequent
Code Deployments

260x
Faster Incident
Recovery

**The leading adopters of DevOps
outperform others**

Undergoing DevOps Transformation Means *Overcoming Some Common Challenges*

Technology

- Standardizing the app portfolio
- Modernizing to Hybrid Multicloud Architecture
- Embracing open innovation

Culture

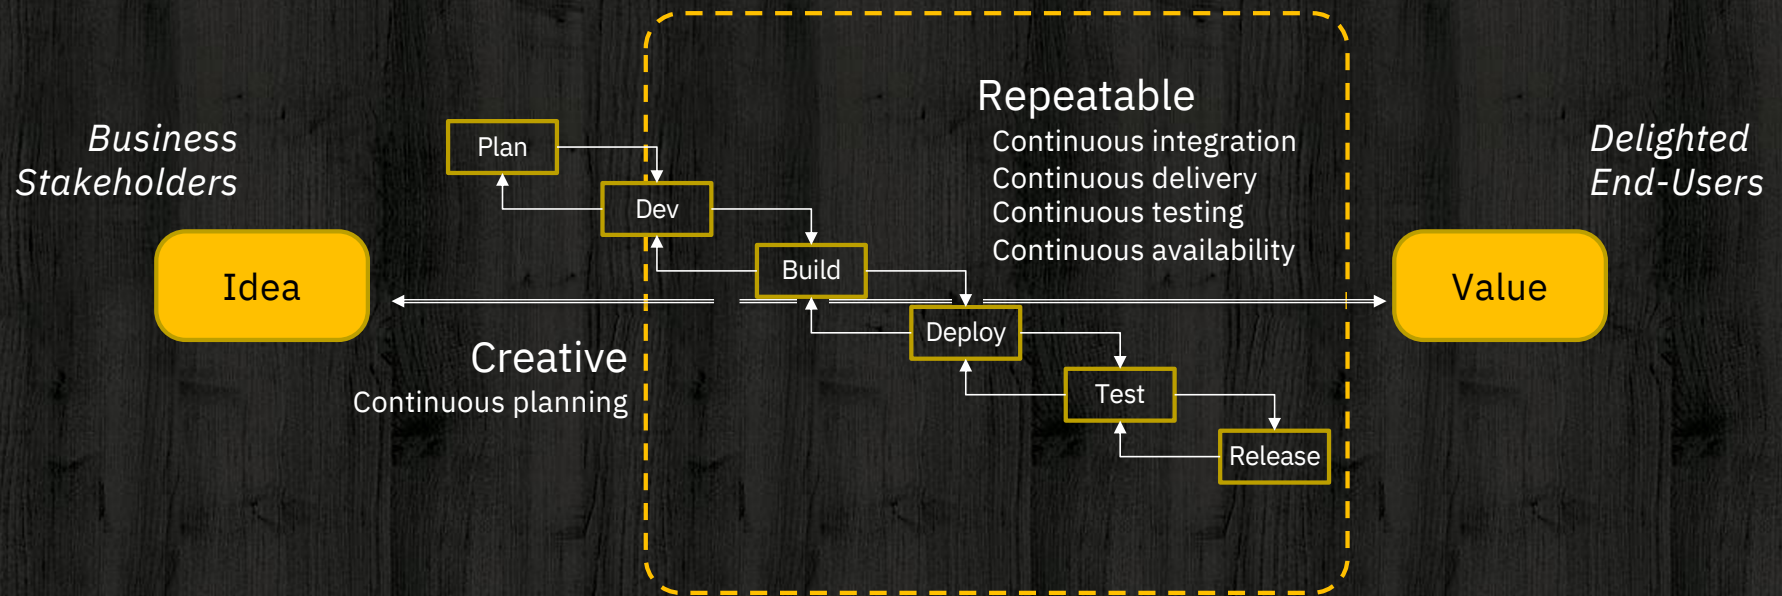

- Engagement with business partners
- Alignment between Dev and ops team
- Shifting employee mindsets and expectations

Scale

- Developing continuous improvement mindset
- Aligning organizational processes to the new model
- Measuring the benefits of transformation

DevOps pipeline - Automate the repeatable

Co-create your DevOps Transformation Journey

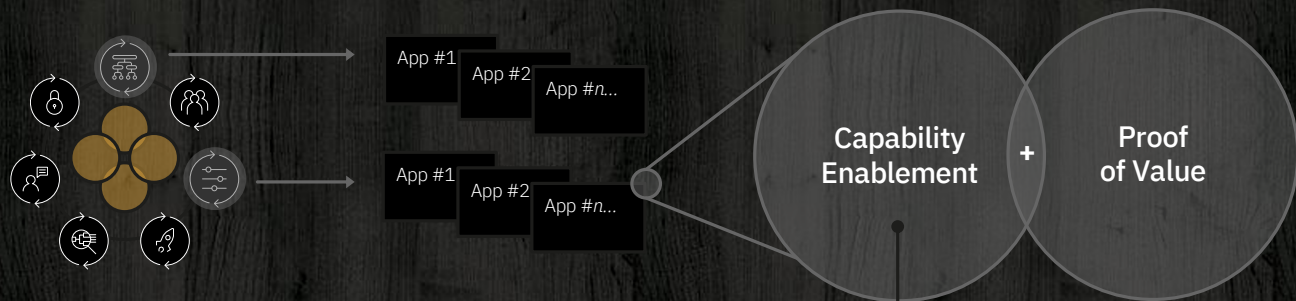

01

Design Your Target State

02

Establish Your DevOps Foundation

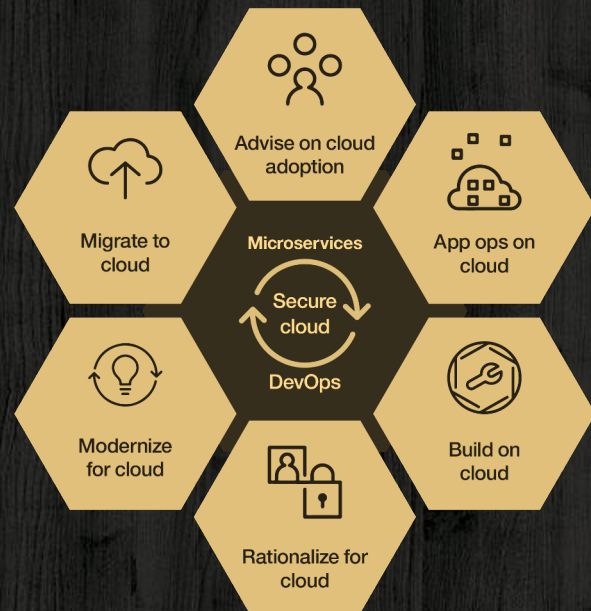

03

Scale & Expand Your Capabilities

Enterprises need DevOps as a Foundation service to build, migrate, modernize, run and manage cloud applications

Cloud Platform Architecture & Engineering

- Platform Architecture & Engineering Services
- Service Reliability Engineering

Solution DevSecOps

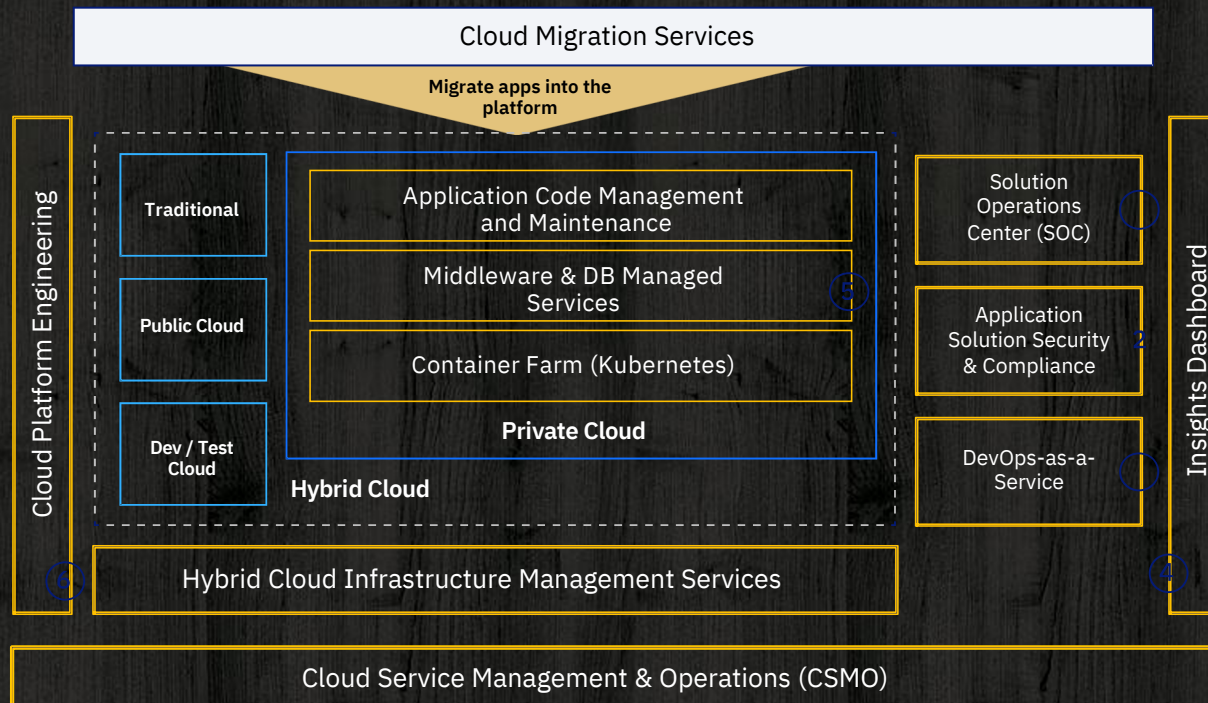

- DevOps Engineering Services
- Toolchain as a service (Dev & Ops)
- Dev / Test Environment as a Service

Solutions Operations Center

- Run and Manage Operations
- Middleware Managed Service

DevOps services extend to support Private Cloud and Container management services

Integrated Platform Architecture and Engineering

- **Architect and Engineer services:** Build, Run and Manage hybrid cloud solution environment
- **Cloud Management Platform & governance:** Standardized and cost-effective consumption of cloud infrastructure services
- **Orchestrated Solution patterns:** Automated creation of full solution stack for pre-defined Cloud solution offerings which can be tailored to meet customer needs
- **Cloud-enabled Software:** Middleware and application products that are available as a managed platform-as-a-service
- **Integrated Service Management architecture and model:** To handle ITIL chain for a solution spanning multiple Cloud providers and hybrid platforms

The future is about Hybrid Multicloud Transformation
