# The core of Flow Engineering is 4 Maps

The 4 Key Maps define direction, align stakeholder perspectives and guide decisions

**Outcome:** Define and clarify outcomes

**Value Stream:** Identify and address flow constraints

**Dependency:** Visualize and address external needs

**Capability:** Measure and address internal needs

# Flow Engineering Starts With Outcomes

*“Begin with the end in mind”*

By first focusing on outcomes, we create clarity of vision.

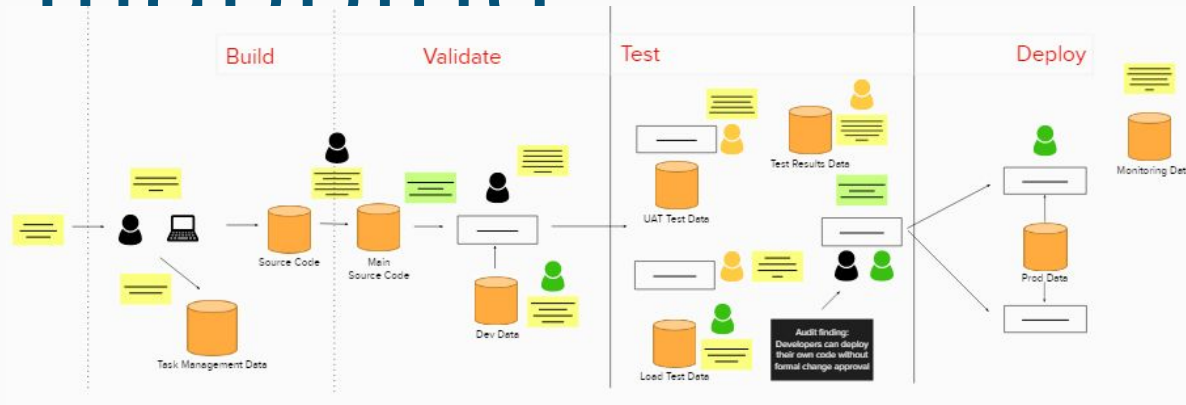

By working as a team, we create alignment.

# Find friction with Value Stream Mapping

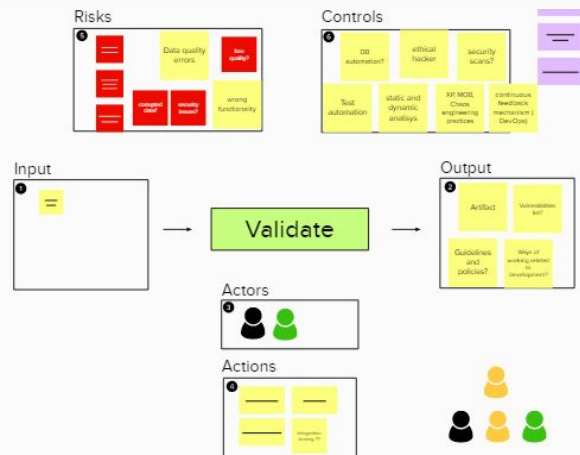

# Look outside with dependency manninn

Who else influences our value stream?

What regulations and compliance do we need to ensure is built into our process?

How to we create and maintain a culture of safety as we scale?

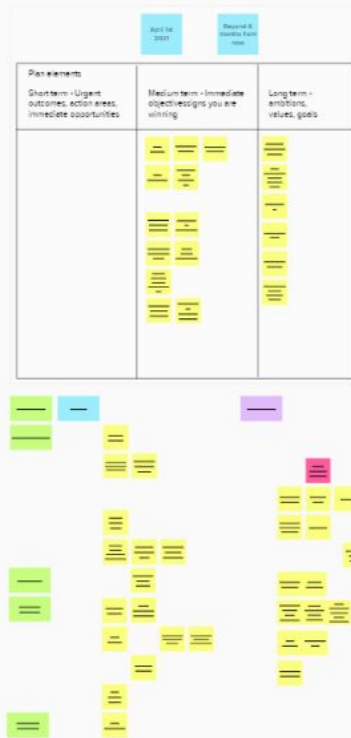

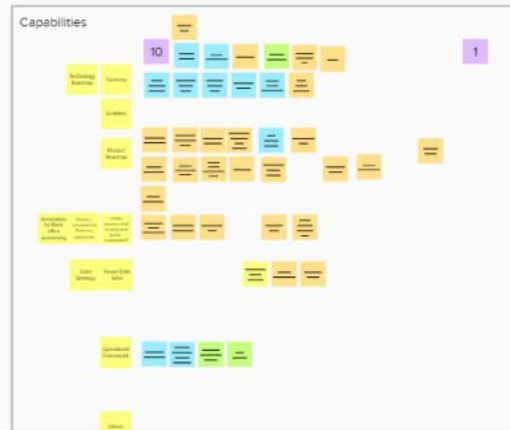

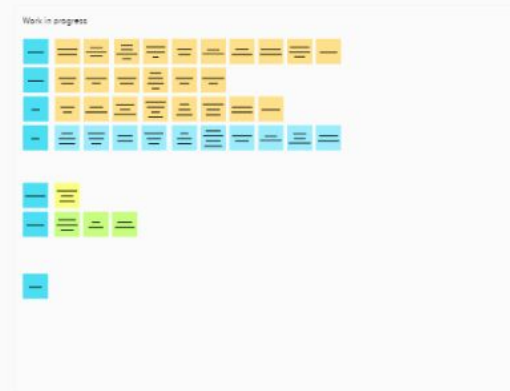

# And looks into capability

Group 1: Dave, Geoff, John

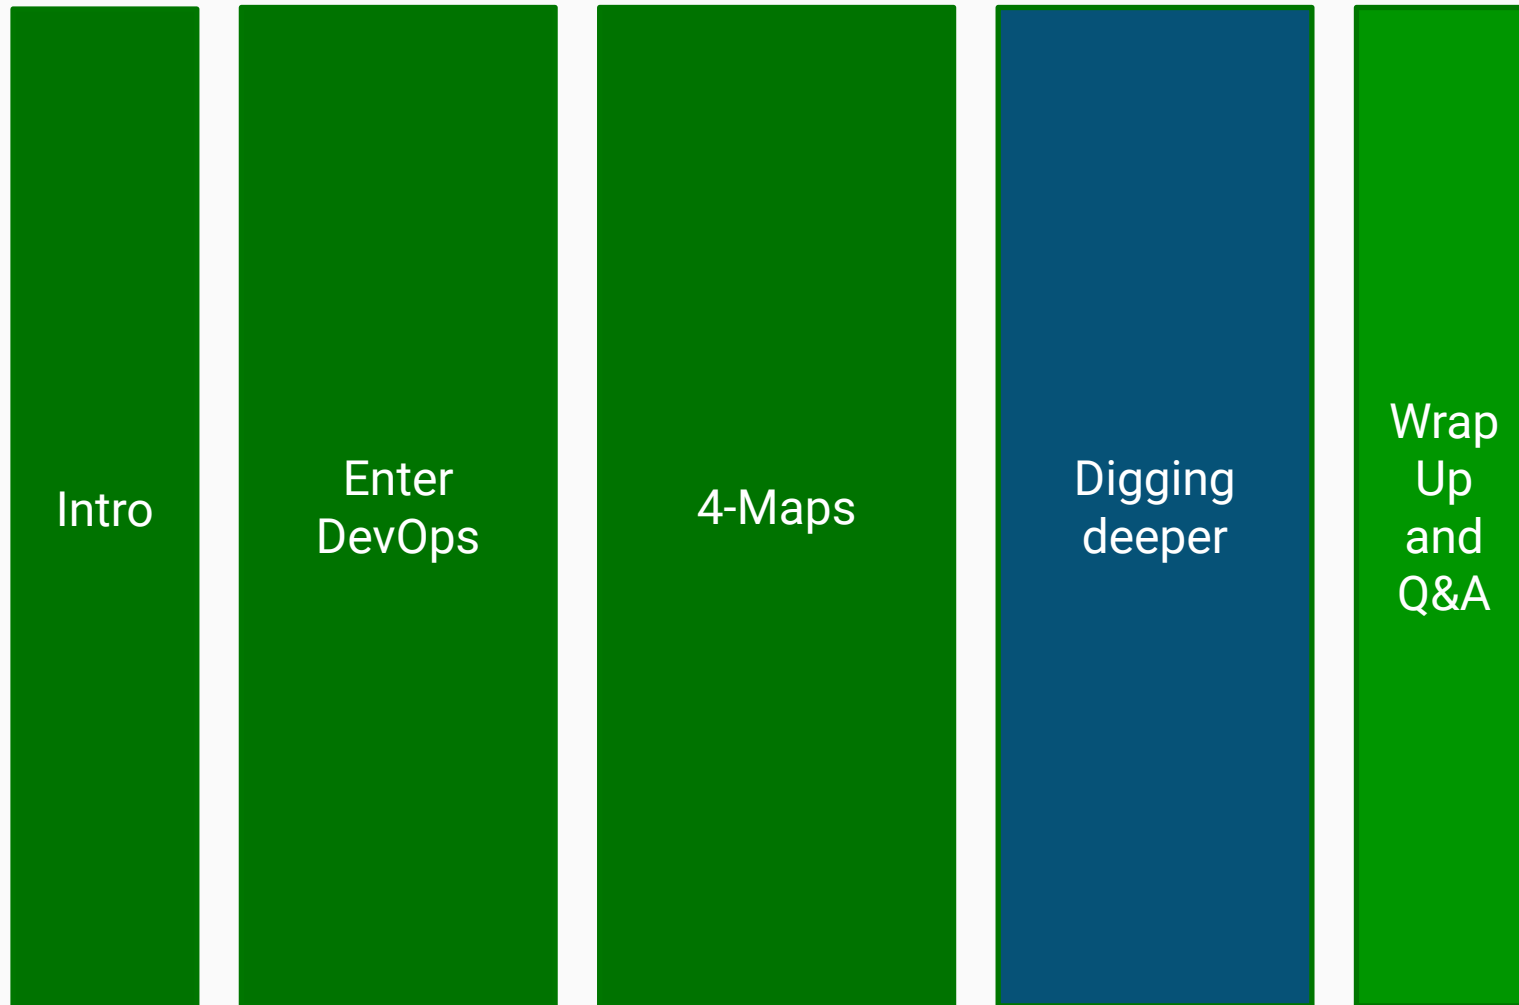

Group 2: Alex, Daniel, Rez

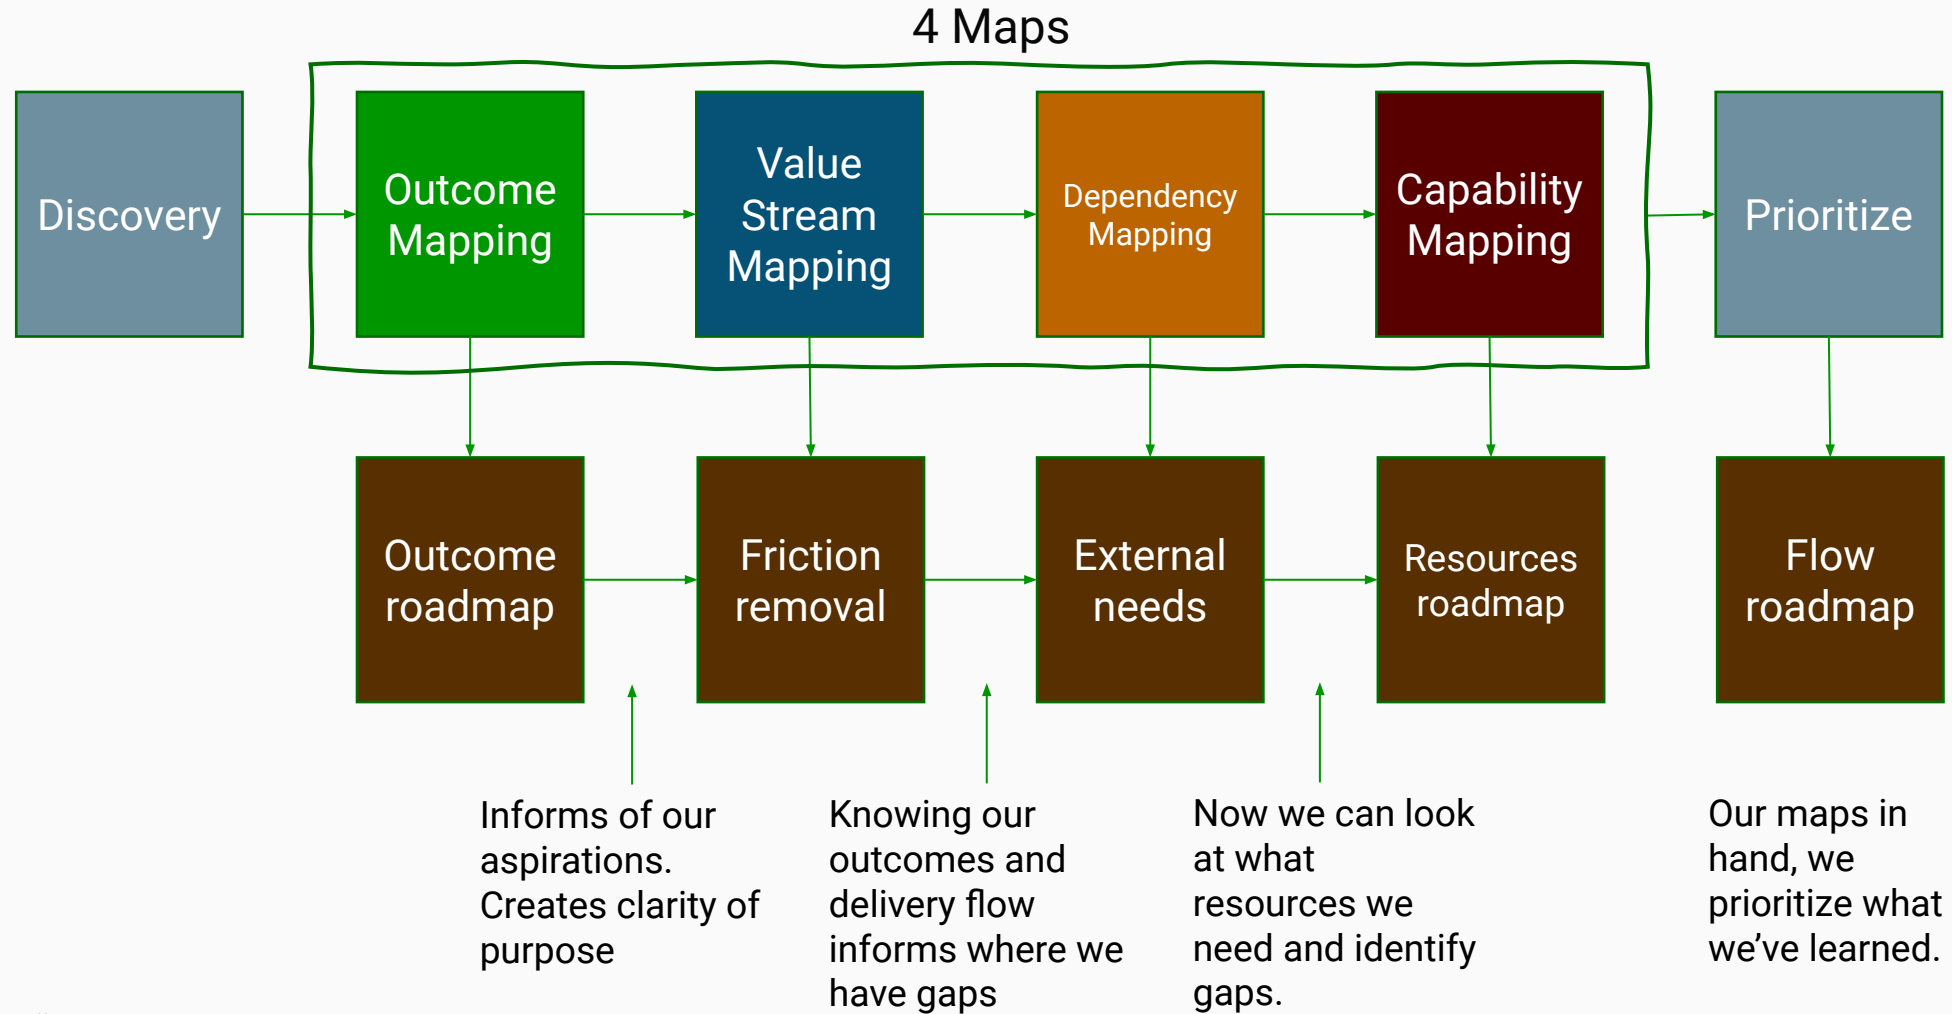

What do we have?  
What are we missing?  
What will prevent us reaching our goals?

# Order and context

# Great, I'm convinced, now what?

# 4-Maps of DevOps

- Start with outcomes not solutions
- Plan for small, incremental changes
- The value is in the mapping not the map
